

# StabiLift Automatic HD

STABILIFT Automatic has been developed in association with The Swedish Rescue Academy and other professional rescue teams.

The product has been specifically designed for:

1. Be simple to set up and easy to use
2. Handle all stabilizing and emergency lifting requirements at road traffic collisions.
3. To secure loads when lifting heavy vehicles with airbags.

**STABILIFT** extends automatically using a gas spring. The unit can also be raised and lowered using a simple lever.

**STABILIFT** is possibly the simplest to use and most rapidly deployed rescue strut on the market.
